

Indexers

Vertical Hydraulic Index Tables

These high-precision indexers are perfect for most trunnion and carousel type machines. Their heavy load capacity and "non-lifting" tabletop make them even more enticing. The interlocking three-piece gear increases the accuracy of these tables the longer they are used.

- Hirth Coupled with +/- 5 arc sec accuracy
- Heavy Duty — carries large, heavy fixtures
- Hydraulic Powered
- "Non-lifting" dial plate
- Less than .0004" table run-out
- Electric powered version available
- Tailstocks are available

Horizontal Hydraulic Index Tables

These heavy-duty indexers feature a "non-lifting" tabletop that allows them extra capacity. The interlocking three-piece gear increases repeatability with use and makes them perfect for precision machine tools. These indexers are primarily used in dial index or rotary transfer machines, or are often called simply "dials". Hydraulic power packs are available for operating these indexers. Electrical versions are also available.

- Hirth Coupled with K5 arc sec repeatability
- "Non-lifting" dial plate
- Standard 4,6,8,12 and 24 station indexers
- 2,3,5 and other specials available
- Sealed housing keeps coolant out of the oil and away from the switches
